

Are You in Compliance?

Guidance on CUI in the National Institute of Standards and Technology (NIST) SP 800-171 Revision 3

Outlined below are some key takeaways from the draft guidance on CUI in NIST SP 800-171 Rev. 3, and ways SyberGRC can assist in achieving compliance.

Audit Information Access (R3-03-03-09)

Authorize access to management of audit logging and information, including static data relevant to applicable audits.

How We Help:

iDPS can be implemented alongside dedicated personnel to ensure the **periodic assessments across your network** are being conducted with the appropriate resources, while achieving ultimate data awareness in respect to any upcoming, pending, or ongoing audits.

Media Storage (R3-03-08-01)

Entities are required to be aware of, control, and securely store digital and non-digital media containing CUI until the media are destroyed or sanitized.

How We Help:

iDPS will provide the **location of sensitive data across all the assets** your organization requires oversight on. Understanding the content and location of the data, CUI, and media will achieve compliance in both storage and disposal requirements.

Information in Shared System Resources (R3-03-13-04)

Unauthorized and unintended information transfer between shared system resources must be prevented.

How We Help:

By using iDPS across shared system resources and assets, existing static data can be located and identified **before or after it has been transferred**, which assists in compliance with requirements

Transmission and Storage Confidentiality (R3-03-13-08)

Implement cryptographic mechanisms to prevent the unauthorized disclosure of CUI during transmission and while in storage.

How We Help:

In addition to locating applicable CUI and sensitive data, iDPS will **identify files that already contain permissions** and can help in verifying the appropriate access and storage is applied to each individual file.

Protection of Audit Information (R3-03-03-08)

Protect audit information and audit logging tools from unauthorized access, modification, and deletion

How We Help:

iDPS classifies and locates all sensitive data across your business using customized keywords that are critical to your operations and industry.

Unstructured audit and CUI data can be used as the basis of an iDPS implementation, and thus protected once discovered.
