

Are You in Compliance?

National Assembly of Quebec: Law 25 (Bill 64)

Outlined below are some key takeaways from The National Assembly of Quebec's Law 25, formerly known as Bill 64; and ways SyberGRC can assist in achieving compliance.

[53. Section 63.10]

In assessing the risk of injury to a person whose personal information is concerned by a confidentiality incident, a public body must consider, in particular, the sensitivity of the information concerned, the anticipated consequences of its use and the likelihood that such information will be used for injurious purposes.

How We Help:

SyberGRC and iDPS can provide the **location of sensitive data across all assets** that your organization manages. This bird's eye view of your data grants you the power to assess which files pose the highest risk.

[27. Section 70.1]

The information may be released if the assessment establishes that it would receive adequate protection, in particular in light of generally recognized principles regarding the protection of personal information. The release of the information must be the subject of a written agreement that takes into account, in particular, the results of the assessment and...the risks identified in the assessment.

How We Help:

iDPS data discovery scans will **identify files that already contain permissions** which will help serve as a layer of protection for data assets being released to provinces or locations outside of Quebec.

[121. Section 28.1]

The person to whom personal information relates may require any person carrying on an enterprise to cease disseminating that information or to de-index any hyperlink attached to his name that provides access to the information by a technological means, if the dissemination of the information contravenes the law or a court order.

How We Help:

iDPS scans classify, identify, and locate all sensitive data across your business using **customized keywords that are critical to your operations and industry**. This allows you to pinpoint any personal information requiring action or protection required by law.

[160. Section 91 & 92.3]

Anyone who fails to comply with an order of the Commission...In determining the penalty, the judge takes into account the following factors, among others (2) the sensitivity of the personal information concerned by the offence

How We Help:

iDPS uses proprietary, patented technology to **derive the monetary value of each static file it identifies**. This analysis can serve as reliable information for incident disclosure and assessing sensitivity of the data in question.

[20. Section 65.1]

A public body that uses de-identified information must take reasonable measures to limit the risk of someone identifying a natural person using de-identified information

How We Help:

iDPS **provides a comprehensive report of static data** your organization is looking to protect. This overview of files and assets will ensure de-identified information can be clearly delineated from sensitive data containing PHI and PII.
